Part VII – Research Activities

VIIA - Main research interests

Keywords	Brief Description
Species distribution modelling, habitat suitability modelling	Modelling of the distribution of vertebrate species at national, continental and global scale. Modelling of the effects of deforestation on extent of suitable habitat. Work on all 6000 species of mammals, all of the world's amphibians and ca. 4000 species of forest-dependent birds.
Extinction risk analysis, IUCN Red List	Coordination of the Global Mammal Assessment (GMA), which is responsible for the update and maintenance of the extinction risk data of the world's mammals for the IUCN Red List. The work is framed within a partnership among the Department of Biology and Biotechnologies at Sapienza University of Rome, IUCN, and seven other research institutions to maintain the Red List.
Biodiversity scenario modelling	Scenario modelling of the global effects of socio-economic development pathways and policies on biodiversity. Includes spatially-explicit modelling of mammal habitat availability in the future and invasion biology.
Effects of global change on biodiversity and ecosystem services	Several roles played within the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES), as well as contributions to IPCC, within this research line. Studies of the effect of climate and land cover change on biodiversity and ecosystem services. Studies of the impact of climate mitigation strategies on biodiversity.
